- General Notes**
- All materials and execution of landscape works shall conform to the B.C.S.L.A./B.C.N.T.A. Landscape standard. Refer to written specifications for complete landscape documentation.
  - Soil shall be supplied by Fraser Richmond Bio-cycle (Garden Mix) conform to the B.C.S.L.A./B.C.N.T.A. Landscape standard (7th ed.) The Landscape Contractor shall ensure that the on-site planting medium/soil meets the specification & recommendations of the soil analysis taken at the time of Substantial Completion. All recommendations of the soil analysis shall be executed prior to Final Acceptance of the landscape works by the Consultant and the municipal authorities.
  - Minimum planting medium depths:
    - lawn - 671/65mm
    - groundcover - 127/300 mm
    - shrubs - 187/450 mm
    - trees - 127/300 mm (around & beneath rootball)
  - All onsite topsoil to be retained and used onsite as per the B.C.S.L.A./B.C.N.T.A. Landscape standard where testing shows suitable topsoil is.
  - All mulch shall be a minimum of 4cm thickness of composted leaf mulch to the satisfaction of the Consultant and the municipal authorities.
  - All plant material shall meet minimum size requirements as indicated in plant list. Quality of plant material and grading of site to conform to the B.C.N.T.A. standard for container grown stock.
  - All plant material to be supplied on the job site must be obtained from a nursery participating in the BCNA Phytophthora ramorum Certification Program. Plant material provided by the contractor found to be carrying Pr will be removed, disposed of and replaced at the contractor's expense.
  - Tree Protection Measures**  
Where construction, demolition, or excavation is to take place within 4m of the drip line of a tree to be retained, a protection barrier at least 40" (1.2m) in height must be installed around the tree or group of trees to be retained. The diameter of the barrier shall be no smaller than the drip line of the trees). The barrier must be constructed of snow fencing staked every 3' (1m), plywood sheets fastened to wooden stakes or of another form approved by the municipality. The barrier shall be constructed prior to any site work and remain intact until all construction is complete. The barrier shall clearly display all-weather signage indicating that the area is a protected zone. Any work which must be done within the protection zone is to be done by hand. No burning is to take place close enough for the flames or heat to damage any tree to be retained.  
Refer to DNV tree protection detail and plan for approved dimensions.
  - Final location and species selection will be to the satisfaction of the District of North Vancouver.
  - Irrigation**  
Automatic irrigation shall be installed in all planting beds, planters and lawn areas on the developer portion of the site. There shall be no automatic irrigation installed on the DNV portion of the site. Please install 2 hose bibs on the DNV portion of the site.
